DETAILED ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

Claims 1-20 state the limitation "an electric insulation layer positioned externally to said cryostat". This limitation, in conjunction with the other claimed features, was neither found to be disclosed in nor suggested by the prior art. Specifically, regarding the combined teachings of Long (US 3,562,401), Womack (US 4,845,308), Metra (US 6,512,311) and Snitchler (US 6,509,819), no combination of these references would provide proper motivation for adding a electric insulation layer outside of the cryostat. Indeed, as Applicant has persuasively argued, "Long discloses that it is essential for a cryostat to be external to the dielectric layer so as to prevent ambient heat leakage" (Applicant's Arguments dated 2-25-2005, pg 4). Additionally, Long already contains a dielectric layer for electric insulation so there would be no motivation to add an additional dielectric layer to the invention of Long, since, as Applicant has persuasively argued, such a modification "increases the complexity of the manufacturing process for the cables...increases the size of the cable, which reduces its suitability for various uses...[and] increases the costs of the cables." The Examiner agrees with Applicant's conclusion that in the absence of any tangible benefit from using the second dielectric layer and with the above noted drawbacks clearly evident, the ordinarily skilled artisan would have no motivation for modifying the invention of Long to include a second dielectric layer external to the cryostat.
